**A NEW EARLY WARNING SYSTEM**

This chemo-chromic (color changing) self-fusing silicone tape can detect hydrogen gas (H2) leaks as low as 400 ppm in fuel cell, transmission, storage and generation facilities. DetecTape in-service changes from light gray to black when directly exposed to hydrogen gas.

Inspectors and equipment operators can proactively wrap this new hydrogen leak detector over nearly any connection and **visually identify** localized leaks during routine inspections, expediting equipment restoration and improving safety in your facility.

**USE DETECTAPE ON**

- Valves
- Flanges
- Connectors
- Joints
- Fittings
- Welded Seams

**USE IT IN YOUR INDUSTRY**

Research Laboratory  
Gas Refinery  
Fuel Cell Plant  
Fueling Station

**Ordering Information:**

**DT-H210015 Series**  
For proactive hydrogen leak detection on small connections 1/2 inch diameter and under.
